Summer Driving Tips

The snow might be gone, but summer—especially in Iowa—has its own set precautions for safe travel. For instance, heat can not only be dangerous to humans and animals but it can drastically affect vehicle systems and materials such as tires and hoses. Road construction is seemingly everywhere during the warmer months and can change travel plans, increase dangerous situations and cause increased trip times. The [NHTSA has put together some summer driving tips](#) that all drivers are encouraged to review.

Vehicle Fun Facts: Speed vs. Accidents

According to the World Health Organization, for every 1 kmph (less than 1 mph) reduction in speed, there is a 2% reduction in the number of vehicle crashes. That would be a reduction in fatalities, on average worldwide, of 24,000 people for just 1 kmph in speed reduction.
